

# GIGADEV CONSULTING

*Custom business software — delivered at AI speed, backed by 25+ years of architectural judgment*

Scott Shepherd, Founder & Principal Software Architect | Boise, Idaho | (208) 850-1053 | [scott.shepherd@gigadev.net](mailto:scott.shepherd@gigadev.net) | [linkedin.com/in/scottwshepherd](https://www.linkedin.com/in/scottwshepherd)

I help businesses replace spreadsheets, legacy tools, and manual processes with modern, secure web applications. My delivery model pairs Claude AI coding agents with 25+ years of enterprise architecture experience (Hewlett-Packard, UL Solutions, The Princeton Review, H&R Block / RedGear): the AI provides implementation speed, and a senior architect owns every design decision, code review, and test. The result is software with enterprise-grade discipline — delivered in weeks, at solo-practice cost.

## SERVICES

---

- **Custom web applications & SaaS platforms** — multi-tenant, secure, cloud-hosted; .NET / Blazor or TypeScript / Next.js stacks.
- **Legacy modernization** — Excel / Access / desktop-app workflows rebuilt as modern web platforms, with your data migrated.
- **Systems integration** — email (Gmail / Microsoft 365), calendars, CRMs, payments, OAuth / SSO, public REST APIs, and webhooks.
- **AI-powered product features** — Claude API integration: content generation, document parsing, and intelligent workflows inside your product.

## RECENT WORK

---

### **Ninja Prospecting CRM — multi-tenant SaaS platform** *Next.js, TypeScript, PostgreSQL, Chrome extension*

**Challenge:** A B2B lead-generation agency needed a CRM built around LinkedIn-centric prospecting — off-the-shelf CRMs didn't fit the workflow. **Built:** a multi-tenant CRM engine with database-level tenant isolation, Gmail / Microsoft 365 email, two-way calendar sync, a public API, and a Chrome extension that captures LinkedIn relationships into the CRM. **Result:** first commit to customer beta in under 4 months — ~209,000 lines of code, 165 API endpoints, 3,700+ automated tests — delivered solo.

### **APS Inspections Platform — aerial inspection operations** *.NET 8, Blazor, SQL Server, Azure*

**Challenge:** A drone-inspection operator ran projects, pilots, and client billing on spreadsheets. **Built:** an end-to-end operations platform — site inspections, acknowledgment workflows with signature capture, operational and billing reports, and mapping — serving six user roles. **Result:** the company's entire inspection lifecycle now runs on one production platform with full audit tracking.

### **Ninja AI Messaging Studio — Claude-powered outreach engine** *Laravel 12, PHP 8.4, Filament, Claude API, Stripe*

**Challenge:** A LinkedIn outreach agency wanted AI-drafted messages that sound human and follow its relationship-first methodology — not generic automation spam. **Built:** a multi-tenant SaaS with a Claude-API generation engine: the agency's methodology encoded as layered prompts, chat-based refinement, AI document-parsing onboarding, and Stripe billing. **Result:** in production — and the same client came back and commissioned the full CRM platform above.

## WHY GIGADEV

---

- **Senior judgment on every line.** AI accelerates the typing; 25+ years of architecture experience decides what gets built and verifies it's right.
- **Weeks, not quarters.** Seven applications shipped in the last year — three in production, four live on the web as working prototypes — each designed, built, and delivered in days to weeks.
- **Enterprise discipline by default.** Automated test suites, CI that blocks failures, documented architecture decisions, and security built in — OAuth, encrypted tokens, database-level tenant isolation, audit logging.
- **One accountable partner.** You work directly with the architect who writes, reviews, and stands behind the code — no hand-offs, no telephone game.
